

Biosecurity Advisory Service

Stringent biosecurity is absolutely critical for delivering the highest level of protection on-farm.

Our biosecurity experts have years of experience in delivering comprehensive advisory services that go beyond compliance. Our advisers are available to visit on-farm on a date and time that suits you.

As outlined by Professor Christine Middlemiss, the UK's Chief Veterinary Officer, **"It's vital that everyone keeps biosecurity and cleanliness at the forefront of their minds to keep their flocks safe"**.

Ensuring pathogens do not enter your farm is a 24/7 responsibility. It is important to be vigilant at all times and have measures in place to stop disease entering your farm or site. For example, pathogens can enter by: people (e.g. staff, visitors, collection or delivery lorries and drivers) or via wild birds, other wildlife or vermin.

Our biosecurity advisers will outline everything that is needed on-farm to help you implement comprehensive biosecurity measures. This advice will often be more than the requirements recommended by assurance schemes and insurance providers. We will help you enact the UK's Chief Veterinary Officers call to action **"Implementing scrupulous biosecurity has never been more critical"**.

Defining the need for biosecurity and the measures required on-farm may also require changes in behaviour. We work with our clients to understand why change may be needed and provide support to help you implement higher standards. This is critical to changing attitudes on-farm, increasing the effectiveness of your controls and removing the barriers to up-take.

As Professor Christine Middlemiss states, **"It is your actions that will help keep your birds safe"**. Having tight biosecurity measures in place and adopted throughout your site are the most important actions that you can take.

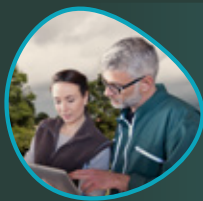

Our Biosecurity Advisory Service has been designed to detect the risks, deter bad behaviour patterns and ultimately control any threats. We use our in-depth experience of attending disease outbreaks across the UK and our extensive scientific knowledge of disease incursion.

What's included:

- An on-farm advisory session, on a date and time to suit you and your business
- A review of how your business operates
- A walk through your farm from the entrance to your livestock areas and around all of your control points
- A review of your current measures in place and how you manage the data that supports your control measures
- A review of your farm layout
- Actions for on-farm processes
- Biosecurity assessment findings and recommendations documented in a short report
- Biosecurity performance scoring and rating so that you can measure your improvement

Our experts help you identify the biosecurity measures needed to provide you with the best protection and that are tailored to your farm and your business.

Biosecurity Advisory Service

Our Biosecurity Advisory Service provides you with an on-farm visit with a biosecurity expert. Our on-farm discovery sessions make us a supportive partner, helping you to minimise risks and imparting knowledge so that you can better protect your farm from disease incursion.

Contingency Plan

Our Contingency Plans encompass every aspect of farming businesses, risks and emergencies that could arise in the future. We help you to design strategies to manage the impact of these concerns. A comprehensive package, this helps make you compliant and insurable.

Biosecurity Plan

Without a Biosecurity Plan in place, you are leaving your business and animals highly susceptible to disease incursion. We document your biosecurity plans to encompass and outline all of the measures that must be followed by every single person on/off-farm to prevent the introduction of deadly pathogens.

Emergency Response Plan

An Infected Premises Response Plan or, as we call them, an Emergency Response Plan, significantly enhances your preparedness and is designed to cover everything that APHA and insurance brokers require if and when they visit your farm business. This plan holds all the necessary critical information, in one place, putting your mind at rest during a time of crisis.

National Outbreak Plan

Our National Outbreak Plan has been designed to comply with the regulations and requirements set by the UK government, providing bird owners with everything you need to know should you be impacted by a disease outbreak or fall within a restriction zone.

Cleaning and Disinfection Plan

Our Cleaning and Disinfection Plan is designed to give you the framework for all of the measures you need to take, with clear instructions that comply with APHA requirements.

Farm Health Guardian

Farm Health Guardian (FHG) distributed by Livetec Systems is a biosecurity management system that records the movement of trucks and people on/off-farm properties for rapid contact tracing in the event of a disease outbreak. An invaluable tool for enhancing biosecurity on-farm.
